

Assignment 3 – tkinter GUI

Watch the [demo video](#) to see how the user should be able to interact with this GUI application.

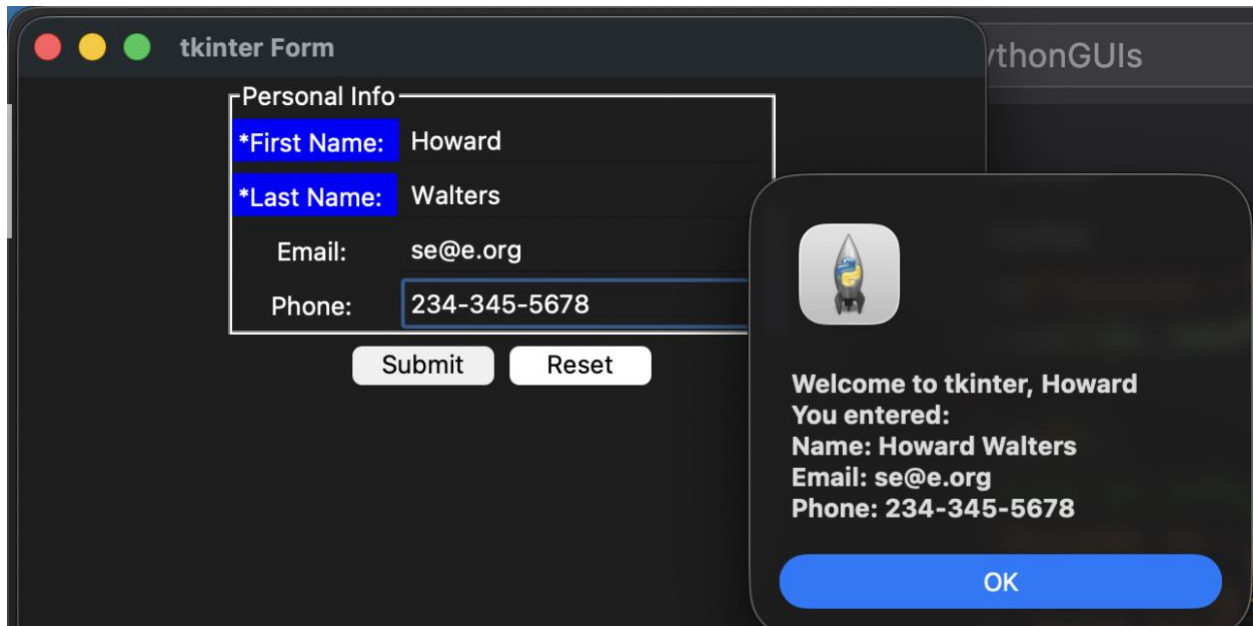

Use the specifications in the table below to design your GUI. Each button has its own functionality, which is described below the table.

Type of Widget	Widget Name	Title or Text	Pack	Size or grid
Main Form	root	tkinter Form		500 x 300
LabelFrame	lblFrPerson	Personal Information	yes	
Label	lblFirst	*First Name:	➔ Use grid	column= 0, row= 0
Add blue background and white foreground to this label (branding)				
Entry	entFirst		Label and	column= 1, row= 0
Label	lblLast	*Last Name:	Entry Widgets	Extend above grid
Add blue background and white foreground to this label				
Entry	entLast		All use this	Pattern to next row
Label	lblEmail	Email:	grid ->	Follow above
Entry	entEmail		grid ->	Grid pattern, next row
Label	lblPhone	Phone:	grid ->	Follow above
Entry	entPhone		grid ->	Grid pattern, next row
Frame	fraButtons		yes	
Button	btnS	Submit	Yes side=tk.LEFT	width = 5 event_handler
Button	btnR	Reset	Yes side=tk.LEFT	width = 5 event_handler
Button	btnQ	Quit	Yes side=tk.LEFT	width = 5 event_handler

Submit button or btnS. Write this event handler function and add it to the button with the command parameter.

displayData

The will display the information typed in by the user, formats it, and displays it in a message box, a component included with tkinter. Please import it. Look at the screenshot to see how your output should be formatted.

Reset button or btnR: clears out the entry boxes. Write event handler

Clear

And add it to the button with the command parameter.

For the Quit button or btnQ, you don't have to write your own function. You can use the built-in destroy. Add it when you create the button like this:

command=root.destroy

Finally, download, run and examine the example files packaged with this assignment. They contain code and components you can modify and use to complete this assignment.

If you have trouble running any file in tkinter, please email me right away.
